### DETAILED ACTION

Claim(s) 1-8 is/are pending.

#### ***Election/Restrictions***

Claims 3-8 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 11 October 2005.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chiba et al. (Suzuki Segregation) in view of Chiba et al. (WO 02/24967), on the same grounds as stated in the Office Action of 7 November 2005.

### ***Response to Arguments***

Applicant's arguments filed 7 April 2006 have been fully considered but they are not persuasive.

Applicant argues that the alloy of Chiba in view of Chiba would not have the claimed precipitation of fine deposit and a fine twin structure and high density of stacking fault because Chiba does not teach heating in an adequate time to a temperature of 600 to 800 degrees C in a condition of applying stress after the solid solution treatment. The Examiner disagrees. Chiba (Suzuki Segregation) teach in Fig. 2b aging at 943 K (670 degrees C) in a condition of applied stress for about 5000 seconds which is about 1.1 hours. The Examiner is not referring to the aging treatment in section 3.3 of the reference, and is instead referring to the aging treatment of Fig. 2b.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
